**TO WHOM IT MAY CONCERN**

I certify that in 2020 Z-Terra North performed pre-stack time processing and diffraction imaging on a LAGO-3D seismic program and three (3) 2D seismic lines in the Oriente basin in Ecuador for **Frontera Energy Corp.** The project involved 17003 shot-points covering an area of 510 sq. km and 1537 shot-points covering 76.85 km of 2D.

Z-Terra North delivered a high-quality product, within the expected timeframe and the result was useful in broader our understanding of the exploratory opportunities in the area that end up with the drilling of three (3) successful wells targeting thin sand bodies.

I will be happy to provide any additional information that may be required

Sincerely yours,

**Sandra Patricia Passos Giraldo**
